Supplementary information, Fig. S1

**Fig. S1** Therapeutic effect of CR2-Crry on an acute AFLD model. Mice were subjected to acute ethanol gavage. Ethanol-fed mice were injected i.p. with PBS or CR2-Crry (0.25 mg/mouse). **a** Serum levels of C3a. **b** C3d deposition, 40×. **c** Serum levels of ALT and AST. **d** Serum levels of TNF-α. **e** Serum levels of IL-6. The data is representative of three independent experiments. The results are expressed as mean ± SD. n = 6, *P < 0.05, **P < 0.01.
