

Always discuss safe diving practices and no further diving

Do not refer for Screening

- No DCI
- Migraine with and without aura and no DCI
- 1 episode of mild non neurological DCI
- DCI after provocative dive profile and the diver agrees to the safe diving practises.

Refer for Screening

- Repetitive or severe DCI
- DCI after non provocative dive profile
- Neurological or skin DCI
- 1 episode of DCI with Migraine with aura
- DCI symptoms within 30 mins of surfacing
- DCI after provocative dives where an assessment of cardiac status will help assess the risk of continued diving
- Commercial divers with neurological, cutaneous or cardio-respiratory decompression illness, particularly with migraine with aura or where the dive profile was not obviously contributor.
