

## Dynamic Mobile Interface

INVOLVE2 runs on multiple models and aspect ratios of mobile device, either natively or using the web browser. The interface of each app displays data and information directly from INVOLVE2, and allows it to be navigated and manipulated.

SmartPhone devices have a rich subset of the INVOLVE2 viewer's features, including the capability to zoom the images to their full size, and metadata/report access.

## Adaptive Mobile Input

Mobile versions of INVOLVE2 accept touch input, but can be operated entirely via a keypad, four-way button and/or a standard QWERTY keyboard as needed.
