

Additional File 1. Histograms of weight change, epidermal thickness and spleen weight.

(A, D) Distribution of weight change in CTL ($n = 70$) and IMQ ($n = 70$) mice. Negative values indicate weight loss with CTL or IMQ treatment. (B, E) Distribution of \log_{10} (epidermal thickness) in CTL ($n = 69$) and IMQ ($n = 70$) mice. (C, F) Distribution of spleen weight in CTL ($n = 69$) and IMQ ($n = 69$) mice. Dotted red lines in (A) – (F) represent density estimates obtained using the Gaussian kernel.
