

Additional file 1. Induced Coumarin-7-hydroxylase activities in liver microsomes of different strains of mice. (upper panel) Induced activities: Induction factor (IF, ratio of induced to average constitutive activity) after treatment with pyrazole (100 mg/kg body weight/day x 3 days, i.p.) and (lower panel) Induced activities: Induction factor (IF, ratio of induced to average constitutive activity) after treatment with phenobarbital (80 mg/kg body weight/day x 3 days, i.p.). * differs from B6 ($P < 0.05$, Kruskal-Wallis test followed by Mann-Whitney U test with Bonferroni's correction).
