

Figure S4. Further analyses of the *SPINK1* c.194+13T>G variant in a minigene assay. **a** RT-PCR analyses of HEK293T cells transfected with minigene expression vectors carrying the wild-type and c.194+13T>G variant. Empty vector, the Exontrap vector pET01. **b** Relative mRNA expression level of the c.194+13T>G variant compared to that of the wild-type as determined by quantitative RT-PCR analysis of HEK293T cells transfected with the corresponding minigene expression constructs. Results are given as the mean \pm SD from three independent transfection experiments.
