Patient with two Choline-PET/CT positive lymph nodes in the right obturator region in 09/2012. The second lymph node metastases was located at the iliaca communis region.

Choline-PET/CT from the same patient as shown in figure S 1A in 10/2013. After salvage lymph node dissection and adjuvant radiation of the pelvic regions, there was no evidence for pelvic lymph node recurrence.
Same patient as in shown in figure S 1A and B. The Picture shows an representative example of the IMRT-Boost-plan. This patient received local boost irradiation up to a sum dose of 56.6 Gy.
