ESM Fig. 1  Flow diagram of the selection of studies for the meta-analysis

Articles identified (duplicates removed) through MEDLINE (n=385), EMBASE (n=783) and PsycInfo (n=17) up to September 2009, yielding a total number of 1,185 articles

Non-relevant studies were excluded based on information from titles and abstracts (n=1,166)

Articles retrieved for more detailed evaluation (n=19)

Studies excluded (n=8):
• Did not include comparison with non-diabetes group (n=1) [1]
• Did not exclude baseline depression or control for this statistically (n=2) [2,3]
• Did not report depression incidence data (n=5) [4–8]

Studies included in the meta-analysis (n=11) [9–19]
