ESM Fig. 1: VEGF-A overexpression stimulates endothelial and beta cell proliferation. High magnification pictures from pancreas of Rip^{TATetO^VEGF-A} mice, treated without (upper panels) or with (lower panels) DOX and BrdU in the drinking water during 14 days. Proliferating cells are visualised in red (BrdU), vessels in green (collagen IV) and beta cells in blue (insulin). Scale bars are 100 micrometer.
