ESM Fig. 4 Effects of adipocyte lipolysis conditioned media and exogenous FA mixtures on gene expression of lipid metabolism molecules by THP-1 macrophages. Macrophages were treated with conditioned media from OPC3911-stimulated hMADS adipocytes (OPC) or with FA mixtures representing in vitro hMADS adipocyte lipolysis (hMADS FA mix) or ex vivo human adipocyte lipolysis (hAd FA mix). **p<0.01, ***p<0.001 relative to the control condition without treatment (white bars) by one-way ANOVA with Bonferroni post hoc test. Data are expressed as mean ± SEM of six different experiments for each condition.
