Analytical and Bioanalytical Chemistry

Electronic Supplementary Material

Application of capillary electrophoresis with electrokinetic supercharging and sweeping for the on-line preconcentration of phenolic acids

Yi-Hui Lin, Hsin-Chieh Huang, Wan-Ling Hsu
Fig. S1 Effects of electrokinetic injection time on the peak height in the EKS-sweeping system. Differences in the injection time did not cause a notable effect on migration time or peak width. See Fig. 3 for other CE conditions.
Fig. S2 Effects of separation voltage on the migration times of the analytes. See Fig. 3 for other CE conditions
Fig. S3 Electropherograms of ten phenolic acids. IS: ketoprofen 0.25 μg/mL; Ci, Fe, Co, Be, Sy, Va, Pr: 230 ng/mL; Ca, Di: 240 ng/mL; Si: 500 ng/mL. See Fig. 3 for other CE conditions.
