Development of a paper-based lateral flow immunoassay for simultaneous detection of lipopolysaccharides of *Salmonella* serovars

Florian Schenk, Patricia Weber, Julian Vogler, Lars Hecht, Andreas Dietzel, Günter Gauglitz
Fig. S1 Cross-reactivity testing: left tested with 1000 ng/mL LPS *S. typhimurium* and right tested with 1000 ng/mL LPS *S. enteritidis*
Fig. S2 Test strips, analyzed with LPS from *S. enteritidis* in concentrations (from left to right): 50000, 10000, 1000, 316, 100, 31.6, 10, 1, 0 ng/mL.

Fig. S3 Test strips, analyzed with LPS from *S. thyphimurium* in concentrations (from left to right) 50000, 10000, 1000, 316, 100, 31.6, 10, 1, 0 ng/mL.
