Fig. S8. Clustering of the tRFs obtained with the IRD-700 (primer 8F, panel A) and IRD-800 (primer 926R, panel B) data sets of the soil microcosms without addition (S) and with addition of nutrients (NB). Indices refer to sampling date and replicate number, respectively (e.g., S0.1, S0.2). Values indicated at the nodes correspond to the frequency of occurrence of that node among 100 resampled data sets and dendrograms using the bootstrapping routine. Height at the y-axis refers to Euclidean distance.
