**Supplemental Figure 1.** Immunohistochemical analysis of CD31 and VEGFR-2 expression in late Neuro2a/pc renal metastases developed in NB-bearing mice vaccinated with Neuro2a.neo (left panels) or Neuro2a/IL-21 cells (right panels). Original magnification: x 250.
Supplemental Figure 2 Antibodies reacting with Neuro2a/pc cells in pooled sera from 4 untreated (left panels: a, c, e and g) or from 4 therapeutically-treated (right panels: b, d, f, and h) mice. Neuro2a cells were stained with a 1:200 serum dilution followed by mouse Ig subclass-specific FITC-conjugated secondary antibodies.
