Supplementary Fig. 2 Comparison of mean historical (1971-2000) Climate Research Unit (CRU) derived observed spring (MAM, left column) and summer (JJA, right column) SPI (solid lines) with historical (1971-2000) CMIP5 simulations (average of 21 models, shown in dotted lines) along three transects A, B, and C shown on maps as red, blue, and green lines, respectively. The gray shaded areas show ± 1SD from the mean (based on simulations from 21 GCMs).

Article title: CMIP5 Projected Changes in Spring and Summer Drought and Wet Conditions over North America
Journal name: Climate Dynamics
