Online Resource 1: Annual cycles of latitude-averaged (5°S—5°N) SST (shades) and precipitation (contours) at different longitudes over the Pacific. a) Full values of observed SST (HadISST) and precipitation (GPCP), b) biases in ACCESS1.0 simulation w.r.t. observations, c) biases in ACCESS1.3 simulation w.r.t. observations. The vertical line separates the Niño-4 and Niño-3 regions.
