a) The graph shows statistically significant changes in subjective impact scores over time (p=0.029). The trend shows an increase to week 3, decrease to week 6 and increase to day 90

b) The graph shows the changes in subjective severity scores over time which was statistically significant (p=0.001). The trend reduced to week 6 then increased to day 90

c) This graph shows the subjective changes in self conscious scores over time but found no statistical significance
