Supplementary Fig. 1  Histochemical analysis of transformants expressing GUS under the control of the \textit{AtRSH1}, \textit{AtRSH2}, \textit{AtRSH3} or \textit{AtCRSH} promoter in mature plants.
Supplementary Fig. 2  Positive control of northern blot analysis with MeJA-treated plants. Experiments including preparation of RNA samples are exactly the same as those indicated in Fig. 6c (MeJA) except for the use of AtVSP2-specific probe (Taki et al. 2005). AtVSP2 expression was previously shown to be induced by MeJA treatment (Berger et al. 1995).
