Figure S1. Expression of AtNUDT7 protein in after-ripened seeds of Atudt7-1 complementation lines.
A. Ten micrograms of protein extract from seeds of Col-0, and the two complementation lines (Atudt7-1t23, Atudt7-1t37) were used to prepare the blot, followed by hybridization with AtNUDT7 polyclonal antibodies. B. Coomassie blue staining of membrane showing protein loading.
