Online Resource 1: Propidium Iodide cytotoxicity test on RB-Y79 cells and CIK.

1, 1.5, 2, 3, 4 and 5 μg/ml PI were tested on RB-Y79 cells and CIK for 24h. Images were acquired using a Leica DFC 360FX camera at time cero and 24 h after PI incubation. Dead cells were counted in the images using ImageJ software. The values are expressed as means ± SD.
