**Online Resource 3** RAxML phylogram of combined chloroplast DNA (rps16-trnQ and atpI-atpH intergenic spacer regions) data set; scale units are substitutions per site. Individual names are genus + species epithet + Genbank number for the atpI-atpH sequence (or if no atpI-atpH sequence, then Genbank number for the ITS sequence). Numbers above branches are bootstrap values from 1000 replicates. Voucher information for all individuals is given in Online Resource 1.
