Supplementary Figure S1

Binding affinities between NR and 14-3-3ω determined by SPR. a GST-phospho-hinge as ligand and 0-10 μM 14-3-3ω wt as analyte (with GST-non-phospho-hinge as negative control). b phospho-NR-Mo-heme wt as ligand and 0-2 μM 14-3-3ω wt as analyte and the truncation variant Δ87 as negative control. c Same ligands as in (b) with 2-80 μM 14-3-3-wt as analyte.
