Fig. S1

A  
5-FU

B  
CDHP

C  
FT

Plasma concentration (ng/mL) vs. Time (h)
Figure S1. Simulated plasma concentration–time profiles of 5-FU (A), CDHP (B), and FT (C) after a single oral dose of S-1 (40 mg/m² as FT).

Plotted symbols show the observed concentration data and the lines represent the results of visual predictive checks. The 5th, 50th, and 95th percentiles (from bottom to top) of the simulated concentrations (1000 replications) are displayed using the final population PK model presented in Table 2.
