Fig. S1. 1,4-Dioxane degradation profiles for strain JCM 14343 at different initial concentrations of 1,4-dioxane. Error bars indicate standard deviation (n = 3).
Fig. S2. 1,4-Dioxane degradation profiles for strain JCM 14343 under different temperature (left) and pH (right) conditions. Error bars indicate standard deviation (n = 3).
Fig. S3. Degradation of ethylene glycol (EG) (A) and occurrence of glycolic acid (B) during 1,4-dioxane degradation by strain JCM 14343 in the presence of EG at 0 mg/L (open triangle), 33 mg/L (closed triangle), 63 mg/L (open square), 121 mg/L (closed square), 462 mg/L (open circle), and 899 mg/L (closed circle). Error bars indicate standard deviation (n = 3).
