Biological data of new hits

Herein the anti-influenza effect of AF-399/42124337 is exhibited. The compound demonstrates comparable anti-influenza activity with Zanamivir in high concentration, and superior activity in low concentration. Complete biological data will be reported in the coming work. The result is for reviewers only.

The anti-influenza virus effects of AF-399/42124337 (grey) and Zanamivir (black). Y-axis represents the cell survival rate at 72 h after influenza virus infection.
