Fig. S1 Relationship between log\textsubscript{10} Zn in soil and log\textsubscript{10} Zn concentration in grain at the five non-calcareous sites treated with sludge cakes (Gleadthorpe, Woburn, Watlington, Rosemaund and Bridgets). Line indicates linear regression: log\textsubscript{10} Zn grain = 0.8215 + (0.4184 x log\textsubscript{10} total Zn soil). R\textsuperscript{2} adj. = 58.3; P <0.001.
