Overall response rate (ORR) in the positive and negative ANA groups were 28.8% and 23.7%, and disease control rate (DCR) was 66.7% and 65.6%, respectively. Both ORR and DCR did not show significant difference (P = 0.47, P = 0.89, respectively).
Overall response rate (ORR) in the positive and negative ANA groups were 6.7% and 27.8%, and disease control rate (DCR) was 53.3% and 67.4%, respectively. ORR did not reach statistical significance although demonstrated a trend towards better efficacy in patients without ANA (P = 0.08). No significant difference was shown in DCR among the two groups (P = 0.27).
