S1 Appendix: complementary information on methods

On Threatened fish and fishers along the Brazilian Atlantic Forest Coast (BAFC)

By Alpina Begossi, Svetlana Salivonchyk, Gustavo Hallwass, Natalia Hanazaki, Priscila F.M. Lopes and Renato A.M. Silvano
We show here the projects in which we collected the data shown in this study. The projects were sequential and were conducted at different sites on different dates. The data collected on the fish cited as consumed by small-scale fisheries of the BAFC (Brazilian Atlantic Forest Coast) permit a glance at the most important food consumed but do not permit a comparison among the sites since the data was collected in different years. The list of projects in this appendix, as well as the archive list, might allow other researchers to consult the original questionnaires, which have been deposited at the Fisheries and Food Institute, Unisanta, Santos, SP, Brazil.

The questionnaires in all mentioned projects, coordinated by one author (AB), include the same question: \textit{What fish species do you consume the most?}. The questionnaires were open-ended and included several fish. For this study, we selected only the two first mentioned by the interviewees, referred to here as “FISH1” and “FISH2”. In some cases (Figure 1), we also collected data on diet recall, which is the answer to the questions: \textit{Did you eat any fish at dinner last night? If yes, which fish was eaten? And at lunch? If yes, which fish was eaten?} Houses were selected at random (numbered in sequence and then randomized). Some of the material has already been published by Begossi et al. (2012, 2013, 2016), among others. The recall of the diet was just about fish.
