Fig. S1. Sequence alignments of control region sequences published in GenBank of small Muroidea mammals occurring in the north of The Netherlands. The top three sequences are voles (Cricetidae) and the bottom four are mice and rats (Muridae). The position of the PCR primers Pro+ (P) and MicoMico (M) is indicated when present in the sequence. Published sequenced was trimmed to fit the targeted area. GenBank accession numbers are also given in Table 1. Note that *Arvicola sapidus* was used instead of *Arvicola amphibius* because no mitochondrial control region (CR) sequence was available for *A. amphibius*.
