Supplementary Figure 4: Linear-trends of $\Delta$SLP from IPCC-AR4 models. Linear trends of $\Delta$SLP for the 19\textsuperscript{th}-through-20\textsuperscript{th} Century simulations of 67 historical runs of 19 models in the IPCC-AR4 database. Dots show trend value for each ensemble member, over either the period 1861-2000 or (if the available record was shorter) the entire model record. Bars indicate the $p=0.05$ limits on single-ensemble member trends from a record of length corresponding to that of each model. Only the model used in this study is identified. Units are Pa year$^{-1}$. Years over which model trends were computed are indicated over each column.
