Supplementary Fig. 1  ZFP-TFs that affect mammalian cellular growth rate.

HEK 293 cells were transfected with plasmids encoding ZFP-TFs and incubated for 3 days. Cells were then treated with trypan blue to stain dead cells, and only unstained cells were counted. The numbers of living cells transfected with plasmids encoding ZFP-TFs were compared to the numbers of living cells that had been transfected with an empty plasmid. F2-K: DSAR2-RDKR-RDER1-QTHR1-KRAB, D10-K: QSHV-WSNR-WSNR-RDNQ-KRAB.
