Supplementary Figure 5. Overexpression of CHMP2b\textsuperscript{Δ10} displays an aberrant phenotype in undifferentiated PC12 cells. Cells transfected with CHMP2b\textsuperscript{Δ10} displayed aberrant cytosolic bodies (a&d). The endocytic tracer, dextran (b, merged image c) and CD63 (e, merged image f) did not always result in co-localisation with the smaller aberrant bodies seen in transfected cells. Bar represents 5 µm.
