**Figure 1.**

(a) Time course of virus titers (p.f.u./mL) in Vero E6 cells infected at an MOI of 1 with EHV-1, EHV-1 gH4, and EHV-1gHS440A. Error bars indicate the SD of the mean from triplicate samples.

(b) Time course of virus titers (p.f.u./mL) in Vero E6 cells infected at an MOI of 0.01 with EHV-4 and EHV-4 gH1. Error bars indicate the SD of the mean from triplicate samples.

(c) Plaque size (%) at 60 hours post-infection (pi) in Vero E6 cells infected at an MOI of 1 with EHV-1, EHV-1gH4, and EHV-1gHS440A. **p < 0.01.

(d) Plaque size (%) at 60 hours pi in Vero E6 cells infected at an MOI of 0.01 with EHV-4 and EHV-4 gH1. **p < 0.01.
