Fig 8.

(a) Western blot analysis of Bax and β-actin expression under different VPA concentrations (Con, 0.2 mM, 0.5 mM).

(b) Immunofluorescence images showing Bax, COX4, and merged images for control (Con) and VPA (0.5 mM) treatments.

(c) Comparison of Bax expression in E14 and E16 stages under control (Con) and VPA (0.5 mM) conditions.
