Figure A: Representative western blot images of PUMA and α-tubulin expression levels in Sham and AV shunt groups at different time points (3, 5, 7, and 10 days).

Figure B: Graph showing PUMA protein level (fold of control) with significant increases at 7 and 10 days compared to Sham and other time points.

Figure C: Graph showing PUMA mRNA level (fold of control) with significant increases at 7 and 10 days compared to Sham and other time points.
