Tenascin-C mRNA

(A) Bar graph showing the expression of Tenascin-C mRNA in PBS and OVA-treated samples. The graph indicates a statistically significant difference (* *p < 0.01) between the two groups.

(B) Immunofluorescence image of Tenascin-C expression in PBS-treated samples. The image shows green fluorescence indicating the presence of Tenascin-C.

(C) Immunofluorescence image of Tenascin-C expression in OVA-treated samples. The image shows a higher density of green fluorescence compared to the PBS group, indicating increased expression.

Scale bar: 100 μm.
