Figure 2. Measurement of TNF-α (A), IL-6 (B), protein (C), MOP activity (D), total cell counts (E), and neutrophil counts (F) in Bronchoalveolar lavage fluid (BALF) 8 hours after LPS-induced acute lung injury or saline treatment (n=5 per group). Data are presented as mean±S.E.M.*P<0.05 vs LPS group; # P<0.05 vs LPS+Insulin group.
