Figure A: Graph showing the effect of poly(I:C) and 25-HC on IL-8 levels over time. The x-axis represents time in hours (0, 4, 8, 16, 24), and the y-axis represents IL-8 levels in pg/ml. The graph compares different treatment conditions:
- 25-HC (-) poly(I:C) (-)
- 25-HC (+) poly(I:C) (-)
- 25-HC (-) poly(I:C) (+)
- 25-HC (+) poly(I:C) (+)

Figure B: Bar chart showing the effect of different concentrations of 25-HC and poly(I:C) on IL-8 levels. The x-axis represents concentrations of 25-HC in µM (0, 0.1, 1, 10) and poly(I:C) in µg/ml (0, 10), and the y-axis represents IL-8 levels in pg/ml. The chart includes error bars and significance indicators (*, **, ***).
