The graph shows the relationship between time (in months) and MMcf/month. The data points are plotted along the x-axis representing time and the y-axis representing MMcf/month. Two linear regression lines are shown: one in blue with a positive slope and another in red with a negative slope. The data points generally follow the trend of the blue line, indicating a decrease in MMcf/month over time. The x-axis labels range from 50 to 62 months, and the y-axis labels range from 2.5 to 1.7 MMcf/month.
