Proliferation, percent of control vs. Percent conditioned growth medium. The graph shows the percentage of proliferation relative to control for two conditions: WT and aprA-.

- WT (squares): shows a gradual decrease in proliferation with increasing percent conditioned growth medium.
- aprA- (downward triangles): also shows a decrease in proliferation, but at a slightly lower rate compared to WT.

The y-axis represents the proliferation, percent of control, ranging from 60% to 105%, while the x-axis represents the percent conditioned growth medium, ranging from 0% to 100%.

Error bars are included to indicate the variability in the data points.
