In the context of interactome size, the graph illustrates the relationship between CCSB-YI1 FDR and the number of interactions. Different datasets, such as Uetz-Screen, Ito-Core, CCSB-YI1, Y2H-Union, Tarassov, and HT-Union, are represented by distinct lines or markers. The scale on the y-axis measures the interactome size, while the x-axis indicates the CCSB-YI1 FDR values ranging from 0.15 to 0.35.
