The graph shows the performance of different classification algorithms. The x-axis represents Precision (%) and the y-axis represents Recall (%). The lines indicate the following algorithms:

- **nn**: Red solid line
- **rf**: Blue dotted line
- **svm**: Green dashed line
- **rfo**: Purple dash-dotted line
- **svmo**: Orange long-dashed line

Each line represents the performance curve for a specific algorithm, demonstrating how Precision and Recall vary across different thresholds.
