The graph illustrates the expected fraction of coverage against haploid redundancy. The x-axis represents haploid redundancy, while the y-axis shows the expected fraction of coverage. Three different scenarios are presented:

- **2 reads**
- **3 reads**
- **3 reads for trisomy**
- **3 reads for tetrasomy**

The lines for 2 and 3 reads are labeled accordingly, with different line styles indicating the distinction between trisomy and tetrasomy.
