Additional File 3

Figure S2. Analysis of D-V differences for Bcd and Hb profiles in 3×-bcd embryos

(A and B) Same as panels A and B of Fig. S1, except the data are from 29 3×-bcd embryos. Listed below are p values from Student’s t-tests at the indicated locations in the insets: 0.01, 0.02, 0.01, 0.02, and 0.13 for panel A, and 0.15, 0.39, 0.81, 0.36 and 0.71 for panel B.

(C-H) Same as panels C-H of Fig. S1, except the data are from 3×-bcd embryos. See Table S1 for measured values.
