Additional figure S3. Positional overlap of positively selected amino acid regions of MSP-1 from *P. vivax*, *P. inui* and *P. cynomolgi*. Five positively selected sequence regions of *P. vivax* MSP-1 (region 1 to region 5), inferred by the omegaMap (Figure 3), are shown together with corresponding sequences of *P. inui* and *P. cynomolgi*. Regions in red boxes correspond to those in Additional figure 1. Gray shaded regions are those of short unaligned regions containing indels and repeats.
