Additional file 2 – Sequence variation of 20 haplotypes of the Zp3 279-bp sequence fragment. The haplotype frequency in each species is listed in the right columns.

Numbering of nucleotide sites follows the reference sequence of the Zp3 gene from base 1 to 7732 of NC_007326 (i.e., from base 36581113 to 36588844 [based on Btau_4.0]). The gray-shaded sites are located in coding regions. The abbreviations for species are given in the Additional file 1.
