Figure S1. Observed (bars) and expected (gray lines) mismatch distributions of Finnish populations of bank voles *Myodes glareolus*. a), b) and c) populations of bank voles with native mtDNA type (GLA); d), e) and f) Sotkamo population with both mtDNA types and g) and h) populations of bank voles with red voles mtDNA type (RUT). See Fig. 1 for information about localizations of populations. Values of the expansion parameters are only shown if the assumptions of the Sudden Expansion Model are fulfilled.
