Relative vitellogenin RNA expression levels in fat body (mean +/- SE)

- **Peer groups**
  - Control
  - DMF
  - JH

- **Established groups**
  - Control
  - DMF
  - JH

The graph shows the comparison of vitellogenin RNA expression levels in fat body among different groups. The bars are labeled with uppercase letters (A, B) to indicate statistical significance. For example, within the peer groups, the control group (Control) is compared against DMF and JH, and within the established groups, the control group (Control) is compared against DMF and JH, with letters indicating significant differences.
