Figure 4 Relationship between genome size and repeat elements in *Penstemon* including the relationship of both LTRs and total repeat elements to genome size for both genome reduced *Penstemon* and genome reduced/non-genome reduced *Arabidopsis*¹ (yellow).

¹ Genome reduced *A. thaliana* sequence from Maughan et al. [35]; *A. thaliana* RILs Ler-0 and Col-4; Non-genome reduced *A. thaliana* sequence downloaded from TAIR (The *Arabidopsis* Information Resource) as whole chromosomes; Genome size as reported by Broderick et al. and Schmuths et al. [5, 74].
