The graph shows survival rates over time for different groups of individuals.

- **all individuals**
- **least resistant full-sib family**
- **most resistant full-sib family**

The x-axis represents the number of days in the test, ranging from 12 to 28. The y-axis represents survival rates, ranging from 0 to 1. The graph illustrates the survival patterns of all individuals and two specific full-sib family groups, with the least resistant family showing a quicker decline in survival rate compared to the most resistant family.
